

MagTat

Magnetically Targeted Therapeutics

A therapeutics method that aids in neuropathic pain

Pain management for Peripheral Neuropathy is a major medical concern

PN is widespread and can be induced by a variety of diseases

NEED FOR MagTat

- Initial market analysis indicates a specific market need for the MagTat and related commercial products in both the military and civilian sectors
- An estimated 20 million people in the United States have some form of PN, a condition resulting from damage to small nerve fibers of the somatosensory nervous system that can cause symptoms such as numbness, burning pain, paralysis, and even organ dysfunction or failure

CHROMOLOGIC ADVANTAGE

- The neuropathic pain market was labeled as a \$2.4 billion dollar market in the year 2010 and is expected to increase significantly

MARKET OPPORTUNITY

- Since the technology offers an innovative advance in neuropathic pain, it can address this large market need of over \$3 billion in the seven major markets (United States, Japan, France, Germany, Italy, Spain, and the United Kingdom) by 2020
- The potential sales revenue of the technology and its related products can reach more than \$10 million within 10 years
